

April 5, 2006

Hello,

Thank you for taking the time to read this during your very important day of activities. I am interested in new ways and ideas in America, that will help stabilize our country and decrease the debt. I live in a small community with small community banks. We had a Wal-Mart move in up North and even though the town opposed it, it happened. Many small businesses suffered and the same may happen to local banks if the bank of Wal-Mart moves into town. We strive to be a conscious community where the whole of the people and the environment are appreciated and supported. It is time to re think the way America is utilizing her precious resources and money. It is not the time to undermine local economies. We are given the right to choice in this country. Please listen to the people and let's get back the power to the people and children. The corporation mentality does not support the whole of the planet or her precious resources. Please do your best to insure a safe debt free world for the children of the future. Thank you so much!
